## Class StringFun

java.lang.Object
    StringFun

---

```
public class StringFun
extends java.lang.Object
```

In this class we learned how to use string methods. The additional methods that I chose are string concatination which is s.concat(otherString). It connects two strings into one, taking one of them as an argument, so it will come after the other one. The other method is s.toUpperCase() -- this method makes all symbols in the string uppercased.

### Constructor Summary

| Constructors |
| --- |
| **Constructor and Description** |
| **StringFun**() |

### Method Summary

| All Methods | Static Methods | Concrete Methods |
| --- | --- | --- |

| Modifier and Type | Method and Description |
| --- | --- |
| static void | **main**(java.lang.String[] args) |
